

The Tek has been providing quality IT outsourcing and IT consulting services for small business and enterprises.

- **Windows 2003 / 2008 Small Business Server.** If your company has under 20 employees there generally is no need to deploy multiple services to handle email, fax, and centralized file and printer sharing. Our IT consulting services can assist your company in deploying a SBS server which will support your company for years to come.

- **Active Directory.** AD is the leading centralized user management system on the market today. Not only is a core part of any company's infrastructure for the management of desktops, its also often integrated with many on-line web based services providing single-signon services for corporate employees. Let The Tek design an Active Directory infrastructure which suits your businesses needs today!

- **Network and Firewall Design.** No company today can survive without a well designed network infrastructure. Not only do companies these days need simple in office network solutions but also more complicated VPN and Firewall configurations. Leave this daunting task to The Tek and make sure your company never has to worry about the complexity of network, firewall or VPN design very again.

- **Backup And Recovery.** Data backup and recovery is often an investment which offers no ROI until its really needed which is why many companies don't realize the need for a proper backup and restoration solution until its too late. The Tek has extensive experience with MANY backup and recovery solutions including **Netbackup,** **BackupExec, Zmanda / Amanda Enterprise, and Comvault** just to name a few. Let The Tek build a backup and recovery solution so your company can stay in business tomorrow.

- **Monitoring.** The Tek offers a wide range of monitoring services as well including an off-site managed monitoring service which will email alert you when any critical part of your infrastructure is down.
